Build a home that's wired for technology

The one thing each new home must have - A well-thought out home containing the Hills Home Hub will add thousands of dollars of value, it'll entertain you, educate your children and this latest smart technology will add convenience that you never thought possible, from as little as \$2400 installed!*

Structured cabling with the

Anyone considering building a new house will have heard someone mention structured cabling or smart wiring, and how important it is to be able to use the technologies available to us, and be prepared for those that are just around the corner.

So what are they actually talking about?

The Hills Home Hub delivers and distributes data, phone, video, audio and TV signals using the latest in data and TV cables from a centrally located enclosure to specially configured wall outlets in any room of your choice. Structured cabling using the Hills Home Hub is preferably planned at the same time as your electrical wiring. The central enclosure is home to the devices that enable the delivery and distribution of these signals. It also houses the security system central controller.** An ideal location for the central enclosure is a garage or utility room.

Future Planning

It is important to plan in which rooms you would like to access data, phone, video, audio and TV. This planning is important to you now and to future owners of your home because it adds flexibility and value. The use of a room could change over time. A nursery now will become a teenager's bedroom, and possibly a study or home office in the future. In order to access or share these signals, cables along with wall outlets, containing standard data and TV entertainment points need to be installed.

Welcome to a day in the life of the Hills Home Hub

Video Distribution

Supervise your children as they play in the back yard while you're preparing lunch. The video picture is sent from the outdoor security camera via the Hills Home Hub cables, through the central enclosure to a selected television in any room of your home, so your children can continue playing safely, even when you are not physically there to watch them.

Phone & Intercom

With the Hills Home Hub, you don't have to leave what you're doing to answer the security gate or front door when the buzzer is pressed. Simply pick up the remote to select the television channel programmed for the front gate camera and see who's there. A phone system with intercom and gate release features can then be used to send a signal via the Hills Home Hub cables, through the central enclosure, to release the electric latch on the gate and invite your guests in. Using the phone system as an intercom, speak to a family member in another room to tell them their friends have arrived.

Computer Network

Anyone can access the internet via a centralised server modem to surf the net from any computer in the home. A web page like www.hillshomehub.com.au can be selected to print. The signal travels via the Hills Home Hub cables, through the central enclosure, and the page you have selected will be waiting for you at the printer in your home office.

Multi-Room Entertainment

Keep all your video equipment in the one location with the Hills smart entertainment system and enjoy multi-room viewing and controlling of your DVD, pay TV and VCR on any television in your home.

Once you have selected the pre-programmed channel for your DVD player, use your remote control to activate the PLAY function. The infrared signal travels via the Hills Home Hub cables, through the central enclosure, through the Hills modulator, to the DVD player in your entertainment area. The DVD will then send the movie back to the TV that you're watching. The Hills smart entertainment system allows you to control the functions of your VCR, DVD, or pay TV remotely, in any room where there's a TV.

Distributed Music

Enjoy superior stereo sound in any room of your home with the Hills Home Music wall or ceiling mounted speakers. A CD player in your home entertainment area sends music signals via the Hills Home Hub cables, through the central enclosure to the rooms in which the speakers are located. Set the volume level independently in each room using the volume control.

Home Security

Enjoy peace of mind when you leave your home, knowing your home and valuables are secure. Signals travel from your detection devices such as door, window, interior motion and smoke sensors via the Hills Home Hub cables to the Hills security system controller. In the event of an unauthorised entry, the Hills security system controller will phone you or your alarm monitoring station to report a burglary or fire situation.

*Price is indicative only. Price listed is in Australian dollars. Always consult your builder or installation provider for a specific quote based on your particular requirements and house construction. **optional, depending on model.

You can afford to have it,
and can't afford to build a home without it.
